

Standard Valves

Vacuum Technology.

→ Our company

Founded in 1970 by Ernst-Günter Meßner, our company started by dealing in industrial commodities. Shortly thereafter, we took the step towards our own production of special fittings and pumps used in specialised machinery. The resulting expansion of our business made it necessary for us to establish a new production and administration building in Kalletal. In 1976, we produced the first products used in vacuum technology. Within only a few years, we managed to develop a compact product line which set completely new standards in this area. Our trend-setting products, made according to the current state of the art, and our second-to-none service and flexibility soon turned Meßner into a household name. We are proud to list well-known machine and plant manufacturers from all over the world among our satisfied customers.

Standard Valves

→ Our standard product range

This overview of our product range, which only lists our standard valves, does not include our specialised valves and cylinders. However, we have a large selection of special designs at our disposal that is capable of meeting the most challenging requirements. Our tried and tested building-block system allows for quick and cost-efficient production. – talk to us!
